

New

Rigenera 3

Radiofrequency - LED - Softlaser - Vacuum

Our spearhead of aesthetic technologies as you have never seen it before!

New handpieces

- ◆ More ergonomic
- ◆ Lighter
- ◆ Easy to handle
- ◆ Enhanced RF
- ◆ Start/stop button in optimal position

The new face and body handpieces of Rigenera 3 are specially designed to facilitate the use of the device by the operator and for greater comfort of the patient during treatment. Furthermore, the enhanced radiofrequency makes it possible to increase the synthesis of collagen and elastin, allowing a deeper and more lasting cell renewal.

New software

- ◆ New guided face and body protocols
- ◆ New design
- ◆ More intuitive
- ◆ Easier to use

The new Rigenera 3 is even smarter thanks to the completely renewed software! The step-by-step instructions allow the operator to carry out targeted and effective treatments: the images show the precise points on which to act and the movements to be performed. Each protocol is also divided into three sequential phases of drainage, detachment and toning, guaranteeing a complete and deep treatment.

New cosmeceutical synergy

Together with Ebrand's specialists, we have specially created a cosmeceutical product to be used in combination with our Rigenera 3 to enhance its effectiveness.

Tekno-massage gel oil allows better smoothness of the handpieces and promotes the delivery of the active ingredients in depth in the treated area. Together they guarantee an evident result: natural lifting effect, tissue toning, reduction of cellulite blemishes, deep hydration of the dermis and more compact texture.
